

Technical Bulletin 200708

www.jcm-american.com

The JCM web site provides the tools you need, including the software information database with DIP switch information, our photo parts catalog, online ordering form, repair service, and more.

Parts are Parts

Part No. 900-100519R Right Transport Cover
900-100767R Left Transport Cover

Description: UBA Transport Covers

Usage: The left and right UBA Transport Covers of the UBA Validator protect the internal components and wiring harnesses from contaminants and damage.

Note: JCM Engineering specifically designed the side covers of the UBA to prevent harness pinching and excessive dust and debris build up from entering the unit. This, in addition to other improvements, such as sealed ball bearings on the belt driving shafts, and shielded sensor trays reduce many maintenance calls on the casino floor. By preventing excessive smoke and other contaminants from accessing the internal moving parts, preventative maintenance and cost of operation is greatly reduced.

The list of JCM bill validator software provided herein notifies customers of the latest versions developed. However, the listing does not identify versions approved by gaming jurisdictional authorities for actual use. Customers should consult JCM's Parts Sales departments concerning approved versions for jurisdictions of intended use.

Save Time and Labor with JCM's Intelligent Cash Box System

The ICB[®] (Intelligent Cash Box) system is a unique cash management system that allows the operator to track a cash box and its contents through the entire cash process. The ICB system eliminates the need for dedicating cash boxes to specific machines, or putting barcode identification labels on the cash boxes. The cash boxes are tracked electronically eliminating most variance issues, and with the custom reports provided to each department, accuracy and efficiency is greatly improved.

Technical Bulletin 200708 August 2007

Technical Tips

Question: How do I ensure proper grounding of my Sentry Bezel when it is installed?

Answer: The Sentry Bezel uses a conductive Nylon material to reduce damage caused by static discharge. This form of electrical discharge is why proper grounding of a Sentry Bezel is very important. The circuitry within a Sentry may be interrupted by a static discharge and can cause the Bezel LEDs to display improper signals.

Answer: When installing the Bezel be sure to use all of the provided hardware. The installation screws (Part No. 186-300514R), utilize a specific style lock washer that ensures proper grounding to the plastic surface. Screws without washers, or those having flat washers may not provide the proper grounding, and can lead to static electrical induced failures of the Bezel electronics.
