JCM Global Provides Bill Validation Solutions for New Railways Project in Azerbaijan

DUSSELDORF, Germany (14 June 2016) – JCM Global's note-recycling iPRO-RC™ bill validator is playing a key role in a massive new railways project in Azerbaijan.

The new Baku-Hırdalan-Sumqayıt railway route uses electronic ticketing systems by Elektronet, and JCM's iPRO-RC bill validators power consumer transactions. To date, 15 ticket vending machines and 40 turnstiles are operational in two stations.

The plans ultimately call for 1,000 ticket vending machines in 200 train stations throughout Azerbaijan, making it one of the largest installations of its kind in Eastern Europe.

"We are very pleased to be involved with such an extensive and integrated project such as the Baku-Hırdalan-Sumqayıt route," said JCM EMEA General Manager Payam Zadeh. "In traffic solutions across Europe and around the world, operators and integrators have found iPRO-RC to exceed expectations of security, capacity, and reliability, and we are grateful to Elektronet for bringing JCM Global into this exciting project."

Elektronet's Chief Operating Officer Can Yanyali has stated that the cooperation between Elektronet and JCM will continue for the upcoming projects in the region.

JCM's iPRO-RC is designed for simple and secure operation. The iPRO-RC uses roller friction technology that directly transport notes into the recycling chamber, resulting in maximum uptime and operational cost reduction. Its powerful anti-stringing technology is combined with industry-leading sensing package for the highest levels of protection, all while maintaining a high first-time acceptance rate. iPRO-RC was built to recycle up to 100 notes of denominations, which reduces coin starvation and coin hopper capacity.
